

Nu-Flame Fuel

MADE FROM 100% RECLAIMED AND RECYCLED WASTE

Nu-Flame Ethanol fuel is the safest and greenest fuel on the market today and here's why...

- *Corn-based ethanol is neither cheap nor green!*
Most fireplace fuels on the market today are made from corn ethanol. Corn ethanol requires more energy to produce as it releases when it is burned. Turning food into fuel is economically and environmentally harmful.
- Nu-Flame Fuel is made right here in the USA from recycling 100% waste, keeping our landfills and water-ways cleaner.
- We use a patent pending "Safety Pour Valve" flame arrestor that prevents the accidental ignition of fuel inside the bottle.
- Nu-Flame Fuel creates no odor, soot, smoke or hazardous fumes. Safe for use indoors and out, providing beautiful vibrant colored flames with a long burn time.
- We added "BITREX™", the worlds most bitter substance to prevent children and pets from ingesting.
- Our recyclable fuel bottles feature a child proof cap and are made with 30-40% recycled material.
- Nu-Flame Fuel is Highly biodegradable and safe for the environment.
- Enjoy 2.5-4 hours of burn time per bottle.
- 1 Liter contains 6% more fuel than a 32 oz. quart bottle. That's 2 oz. more per liter and 22 oz. more per 12 pack!

THE GREENEST FUEL THERE IS
